Important Information About Lead In Water:

If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily form materials and components associated with lead service lines and home plumbing. We are responsible for providing drinking water, but we Cannot control the variety of materials use in plumbing components.

There is no safe level of lead in drinking water. Exposure to lead in drinking in drinking water can cause serious heath effects in all age groups, especially pregnant people, infants (both formula-fed and breastfed), and young children. Some of the health effects to infants and children include a decrease in IQ and attention span. Lead exposure can also result in new or worsened learning and behavior problems. The children of persons who are exposed to lead before or during pregnancy may be at increased risk of these harmful health effects. Adults have increased risk heart disease, high blood pressure, kidney or nervous system problems. Contact your health care provider for more information about your risks.

When your water has been sitting for several hours you can minimize the potential for lead exposure by flushing your tap for 30 seconds to two minutes before using water for cooking and drinking.

If you are concerned about lead in your drinking water, you may wish to have your water tested. Information on lead in drinking water, test methods, and steps you can take to minimize exposure is available from the safe drinking water hotline 800-426-4791 or at www.epa.gov/safewater/lead.

Este informe contiene informacion muy importante sobre su agua potable. Traduzcalo o hable con alguien que lo entienda bien.

LCRR & LCRI Public Dashboard
